We help you sell your ex-lease and liquidated equipment and assets.

Whether serving as your remarketing partner, or as an extension to your company's in-house remarketing department, your company will benefit from **RDLX's** established record of successfully reselling end-of-lease capital assets to end user (retail) markets worldwide.

Our expertise and decades-long involvement in the Broadcast, Video, Film, Pro Audio, and Electronic Test Equipment industries give us

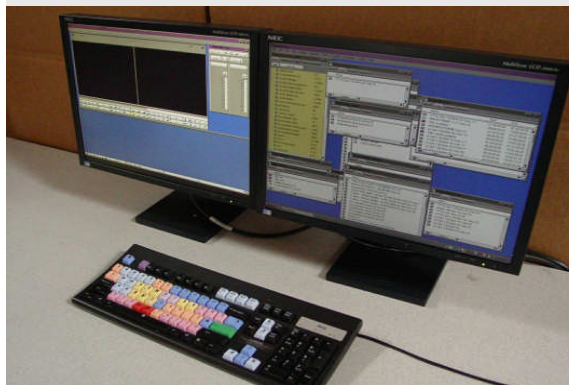

a competitive selling edge for these products. And while we have sold to markets outside our specialized areas, we focus on reselling within the industries we know most intimately and that result in higher turnover of ex-lease assets for our partners.

Additionally, we offer services beyond what standard asset resellers can offer. Since we own and maintain equipment-testing facilities, we can reliably test, assess, and report the condition and performance of your recovered assets and which we resell for you.

The success of our business is—and always has been—highly dependent on working with long-term partners and repeat customers. We ensure that both lessor and customer confidence is maximized, yielding higher selling prices of your ex-lease capital assets to our established network of end users.

What we will do for you:

- Recapture the Maximum Residual Value for your end-of-lease (EOL) capital assets.
- Pre-lease consulting: Assess EOL value, life of technology, and EOL marketability.
- Establish asset Residual Value, Fair Market Value, Orderly Liquidated Value, and Forced Liquidated Value. Provide desktop and formal appraisals for single pieces, systems, or complete facilities.
- Facilitate re-lease / lease-back referrals.
- Asset recovery and liquidation on defaulted accounts and bankruptcies.
- Comprehensive EOL condition reports: Power up, test and report the condition of each asset in detail, enabling your firm bill back to Lessee for recovery of value lost due to damage or loss.
- Facilitate license transfers for licensed software / equipment.
- Warehouse and Inventory: East Coast firms save shipping costs for assets located on the West Coast.
- TSA "Known Shipper" for exports worldwide.
- Market your EOL capital equipment: we'll feature your ex-lease assets on our website, visited every month by over 1,000 targeted buyers worldwide.

Types of facilities assets come from:

- Television Broadcast Studios
- Off-line Edit Suites
- Master Control Rooms
- Post Production Studios
- Audio Sweetening Studios
- Recording Studios
- CGI Facilities
